**Informed consent for pupil dilation.** To have a thorough eye health examination, it is necessary to dilate the pupils. Be aware that for approximately 2 to 6 hours following dilation you may notice the following: blurred vision, extreme sensitivity to light, decreased depth perception, and even feeling "off balance". If you are concerned about your ability to function or drive after dilation, and do not have anyone with you to assist you, you can request to reschedule for dilation. However, your eye examination is not complete until the internal eye health has been examined with your pupils dilated.

**Consent:** *I have read and understand the risk referred to above and hereby consent to having my pupils dilated today.*

**The Newest Technology Is Available In Our Office**

Our office is now equipped with a *Digital Retinal Imaging System* to provide you with an even more thorough health analysis of your eye than previously possible. The *Digital Retinal Imaging System* takes images of the retina (the inside layer of your eye) and assists us in the early detection of disorders such as glaucoma, macular degeneration, retinal detachments, diabetic conditions, and many other health and vision threatening conditions. In some cases, the images can provide detail that is not possible to get otherwise, even with the best examining scopes.

These baseline screening images will be stored in our computers and compared with images from future exams to allow us to detect even the smallest amount of change from one exam to the other. This allows for the earliest preventative measures to be taken. If a person wishes, they can easily obtain their own copies of these baseline digital images\*.

It is strongly recommended that **all patients** (especially new patients) have this procedure performed and it is especially important for anybody who has any of the following:

- **Headaches, floaters, spots, or flashes of light**
- **A family history of diabetes, glaucoma, or macular degeneration**
- **If you smoke (increased risk for retinal problems and glaucoma)**
- **Elevated cholesterol or high blood pressure**
- **Attained the age of 40 or if this is your first time being examined in this office**
- **Very sensitive to lights (especially bright examination lights)**
- **A child (who may not be able to hold their eye open for the entire retinal exam)**

A fee of \$39 will be charged for the baseline screening retinal images **in addition to** your normal exam fee. If pathology is present, then additional detailed images will be taken and the usual \$79 charge will apply. Also, if pathology is found, a medical diagnosis will be determined and the \$79 charge will **possibly** qualify for a claim to be filed with your health insurance company. (We will file the charge with your insurance company for you, and you will be responsible for any co-pay or deductible). **If there is no disease diagnosis**, then the images are considered just baseline screening images, and no insurance claims can be filed. Please check the appropriate line and sign below. **(This procedure will not add any additional time to your visit today provided we know to take the images at the time your dilation drops are put in.)**

\_\_\_\_\_ **(YES) I DO** want the baseline-screening retinal images

\_\_\_\_\_ **(NO) I DO NOT** want the baseline-screening retinal images
